Finishes and materials

Finishes on steel

Bare (suffix BC)

Pregalvanized (suffix PGC)

A zinc coating is applied to the steel coil at the mill prior to fabrication. Once the material is worked by roll-forming, cutting or punching, minimal protection is provided for raw edges. This weakness is typical with precoated material and affects the channel section around holes, extreme ends and the edges of the U-shape lips. Superstrut pregalvanized material is in conformance with ASTM A-525/G-90 specification standards, representing 0.90 oz. of zinc per square foot of steel. This finish is often referred to as “mill galvanized.”

Electrogalvanized (suffix EGC)

Often referred to as “zinc plated” or “electroplated zinc,” the steel and 0.5 mils of zinc are bonded by an electrolysis process. Electrogalvanizing is most commonly applied to small fittings, hardware and threaded products.

GoldGalv® (no suffix)

Gold-coloured zinc dichromate is applied over the zinc, producing a chemically bonded non-porous barrier for protection from moisture and air. This extends the protective life of the zinc, and provides an excellent base for paint, if desired. The GoldGalv hardware finish also provides a low electrical resistance when grounding of the system is required. Superstrut channel and fittings are plated after fabrication, so there are no unprotected edges from cutting or punching. Where field cutting is necessary or scratches occur due to construction handling, you still have the sacrificial protection of the plated zinc to minimize the corrosion of raw edges and prevent spreading.

Hot-dipped galvanized (suffix HDGC)

The material is zinc coated after fabrication, providing total product protection on all surfaces. The fabricated channel or fitting is suspended and then dipped into tanks of hot zinc for a prolonged period, creating a coherent bond. The result is superior corrosion resistance as compared to pregalvanized material. Hot-dipped galvanizing is not recommended for threaded products, considering the zinc coating thickness will often disrupt the threads. Superstrut hot-dipped galvanized is in conformance with ASTM Specifications A-123 (formerly A-386) and A-153. Superstrut channels maintain a minimum 1.5 oz. of zinc per square foot of steel or 2.5 mils (ASTM A-123, Thickness Grade 65). This finish is also referred to as “hot-dipped galvanized after fabrication.”

Epoxy powder coated – green, grey or white (suffix GR, GY, or WH)

Epoxy powder resins are applied electrostatically to the steel after fabrication. Once the material is completely covered with the powder-form epoxy, it proceeds through a 400 °F (204 °C) baking process for 10 minutes, creating a chemical bond. This results in a minimum of 1.5 mil thickness of epoxy coating, providing excellent resistance to chipping or peeling.

Special materials

Aluminum (suffix ALC)

Superstrut channel is available in aluminum. Fittings in HDG finish or fiberglass material are suggested for fastening products.

Stainless steel (suffix SS)

Superstrut channel is supplied in type 316 (T316L) stainless steel. All fittings and accessories are in 316SS (SS6). Contact your regional sales office for availability.

ABB reserves the right to change material and finish specifications without notice, to improve its products.

Channels and concrete inserts

Channels

Material

Steel channels are cold-roll formed from strip steel. Aluminum and fiberglass channels are extruded profiles.

Material thickness

All series 1,200 12 gauge material
 All series 1,400 14 gauge material
 All series 1,600 16 gauge ribbed material

Standard lengths

Standard lengths for channels are 10 ft. and 20 ft. with a tolerance of $+\frac{1}{8}$ in. Special lengths can be requested; however, minimum quantities may apply. Channels are sold per foot.

Warning

Load tables, charts and design criteria provided in this catalogue are intended as guides only. Selection of proper product, support spacing, erection and placement are the responsibility of the user. When improperly used as tools of erection, pipe hanger products have occasionally failed. To avoid an accident, the user is cautioned to use the product only as it was intended.

Concrete inserts

Material

Superstrut continuous insert channel is manufactured from 12 gauge hot-rolled strip steel in two basic sizes as follows:

Cat. no. A302

1 $\frac{1}{8}$ in. x 1 $\frac{1}{8}$ in. $\frac{7}{8}$ in. slot

Cat. no. C302

1 $\frac{1}{8}$ in. x 1 $\frac{1}{8}$ in. $\frac{7}{8}$ in. slot

Standard lengths

Standard lengths are 10 ft. and 20 ft. Product is supplied with foam filler and end caps to prevent concrete from seeping into channel.

Application

For casting into concrete walls, floors or ceilings to provide for attachment anywhere along the continuous slot.

Design data

Load ratings as shown have a safety factor of 3 in 3,000 lb hard rock concrete. Where sound concrete does not exist, the load ratings shall not apply. GoldGalv hardware finish is standard for all Superstrut concrete insert products. This is a multi-process finish of electro-plated zinc, followed by gold-coloured zinc dichromate to give excellent corrosion resistance and a superior paint base.

For more information on load design, see page 67 for engineering data and specifications.

Channels and concrete inserts

Channels at full scale

Available in 10 and 20 foot lengths.

Examples

Two A1200 channels back to back are ordered as A1202.
Two A1200 channels back to side are ordered as A1202C.

Back-to-back steel channel is riveted every 4 inches.
Aluminum back-to-back channel are extruded profiles.
All other combinations are spot welded at every 4 inches.
E and H series are not available in triple and quadruple.

01 Anchor caps
12 gauge, Wt./C: 30 lb/C
A450* For A series
C450* For C series
From pieces of A, B, C channel and a pair of anchor caps, short concrete inserts can be fabricated in the field.

*Finishes
EGC
GoldGalv®

02

02 452TB Spot insert
Standard finish – GoldGalv®
An insert with a knockout saves covering the opening. Accommodates hanger rod sizes from $\frac{1}{4}$ in. through $\frac{7}{8}$ in. by means of an AB102 insert nut, to be ordered separately.
Design load: 1,350 lb in 3000 lb hard rock concrete with a safety factor of 3.
Complies with Specification MSS SP69, Type 18.

03

03 460-10TB Removable plastic closure strip
Designed as an added precaution to keep insert free of concrete. Closure strip fits all $1\frac{1}{8}$ in. wide strip inserts, regardless of depth. Order per 10 foot, standard length is 10 ft.
Material – Black plastic
Wt./C 52 lb

Threaded products and hardware

Channel nuts

Superstrut channel nuts are manufactured from grade 2 mild steel and are case hardened.

Design data

Superstrut self-aligning channel nuts are designed to provide resistance to pullout and resistance to side slip in excess of the full strength of the channels with which they are used. The extreme resistance to side slip results from the unique design of the alternate teeth, spaced and designed to develop a wedging action that increases with pressure or load.

Screw threads

All threaded products are American Standard thread, free fit class 2.

Thread size (in.)	¼	⅜	½	¾	1	1 ¼	1 ½	2
Threads per inch	20	18	16	13	11	10	9	8
Design torque (ft.-lb)	6	11	19	50	100	125	185	275

Finish and special materials

Standard finish for all hardware is electrogalvanized (EGC) or GoldGalv®. Stainless steel type 316 is also available. Contact your regional sales office for availability and minimum quantities.

Standard finishes – electrogalvanized (EG), GoldGalv®, stainless steel or bare (B)

Example: H115-1/2EG

Sizes through 4 in. furnished with one hex nut per leg.

Sizes 5 in. and above furnished with two hex nuts per leg.

Order by cat. no., pipe size, finish.

Complies with Specification MSS SP69, Type 24.

Fittings and brackets

Material

Superstrut fittings and brackets are manufactured from hot rolled carbon steel.

Dimensions

The following standard dimensions apply to all fittings except as indicated on the individual drawings:

Hole spacing	$1\frac{3}{16}$ in. from end of fittings
Hole spacing	$1\frac{7}{8}$ in. centers
Hole size	$\frac{9}{16}$ in. diameter
Material	$1\frac{5}{8}$ in. wide
Material	$\frac{3}{4}$ in. thick

Application instructions

Parts drawings illustrate a typical use for the fitting, and in many cases, other uses for the part are appropriate.

Design data

Load ratings vary depending on whether fittings and brackets are used with 12, *14 or 16 gauge channel. Ratings are shown for each channel material. (See page 66 for engineering data and specifications).

Nuts and bolts required

Unless otherwise noted, nuts and bolts for use with fittings and brackets should be ordered separately. The standard bolt for the $\frac{9}{16}$ in. hole is a $\frac{1}{2}$ in. hex head cap screw 1 in. long. The 1 in. length may be used with all series channel.

Design load

For more information on design load, see page 66 for engineering data and specifications.

Finishes and special materials

Standard finishes are hot-dipped galvanized (HDGC) and GoldGalv® (no suffix). Fittings are also available in electrogalvanized (EG) and stainless steel 316 (SS6C). Contact your regional sales office for availability and minimum quantities.

Aluminum channel

For aluminum channel, we suggest fittings in HDG (C) or SS6 (C).

SuperMag™

Magnetic fittings for Superstrut metal framing

Powerful, nickel-plated magnets embedded in the most popular Superstrut steel fittings, including square washers, L-brackets, T-brackets and 90° angle brackets, secure the fitting to the strut during assembly. Acting as a third hand, SuperMag fittings allow the installer to work more efficiently and safely with tools and hardware.

Magnetic 90° angle fitting,

SilverGalv™

AB202M EG

2-hole, 1 7/8" H x 2" L (pkg. qty. 50)

AB205M EG

4-hole, 4 3/8" H x 3 1/2" L (pkg. qty. 25)

Magnetic flat bracket,

SilverGalv

AB219M EG

L-bracket (pkg. qty. 25)

AB220M EG

T-bracket (pkg. qty. 25)

Magnetic square washer

SilverGalv

AB241M 1/4 EG

For 1/4" bolt (pkg. qty. 100)

AB241M 3/8 EG

For 3/8" bolt (pkg. qty. 100)

AB241M 1/2 EG

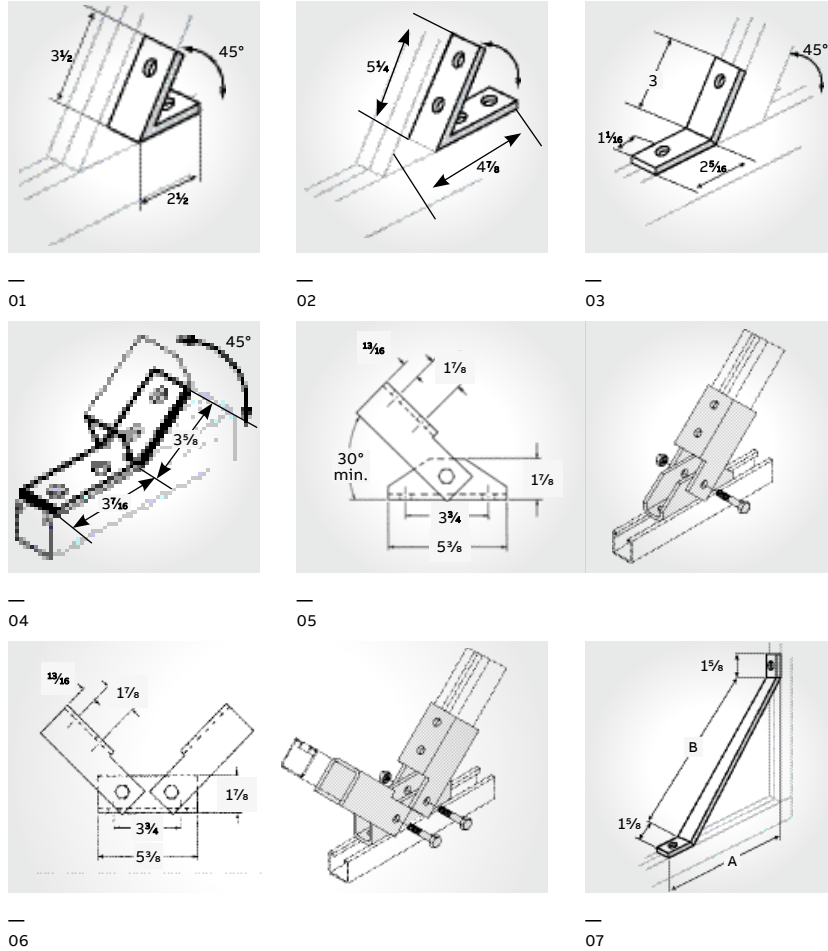

For 1/2" bolt (pkg. qty. 100)

Note: The magnets are only intended for use as an installer aid, not as a permanent installation method on their own. Magnetic fittings must be bolted in place following the same standard installation procedures as non-magnetic fittings for permanent installation. Standard finish is SilverGalv (EG). Best for use with traditional or spring channel nuts.

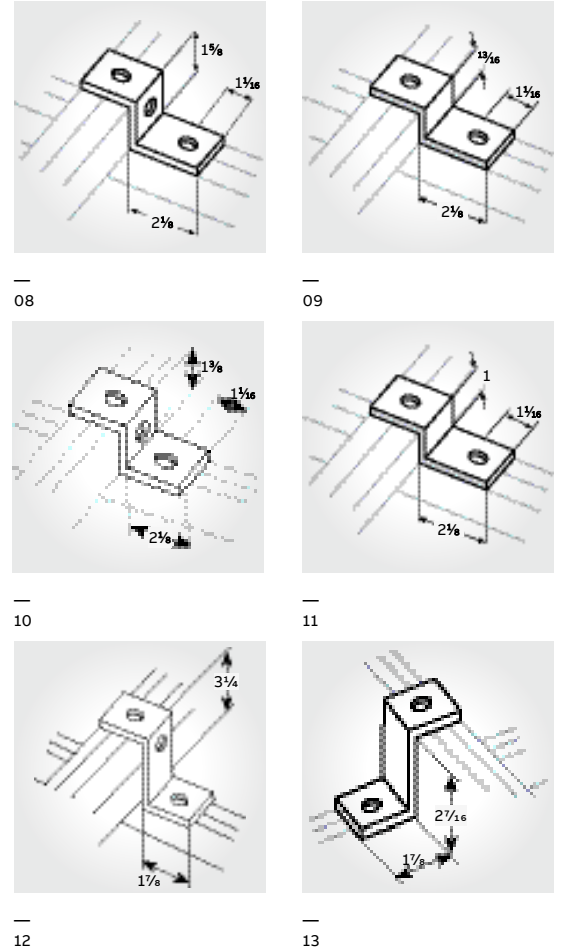

Fittings and brackets

Special application fittings and brackets

01

01 TR292
 Can be used for series A, E and H channels only.
 Standard finish is electrogalvanized.
 Frictionless needle bearings.
 Design load: 500 lb
 Safety factor of 5.
 Wt./C 59 lb

02

02 TR294
 Can be used for series A, E and H channels only.
 Standard finish is electrogalvanized.
 Frictionless needle bearings.
 Design load: 1,000 lb
 Safety factor of 5.
 Wt./C 106 lb

03

03 C728 Pipe roller (pair)
 Cast aluminum rollers, steel brackets. Designed for standard saddles. Order separately for each pair of rollers: two 1/2 in. x 3/16 in. hex head cap screws and two 1/2 in. channel nuts. Space to suit O.D. of pipe and wrapping.
 Design load: 2,350 lb
 Wt./C : 300 lb

Adjustable universal support

Support building services and access equipment on flat roofs and flat surfaces

The ABB adjustable universal support (AUS) provides an easy method for supporting pipes, conduit and equipment on flat roofs, below raised floors and even on level ground applications. The AUS reduces installation time compared to other support solutions such as wooden blocks, cement blocks, straps and clips. These labor-intensive solutions also increase the danger of roof membrane penetration.

The AUS system allows for tool-free adjustment of the pedestal height from 6 to 9 inches with a twist of the wrist.

This ensures that the supported objects or pipes are uniformly supported and no high stress supports are carrying a disproportionate load in a single location.

Cat. no.	Description	Qty.
AUS14-96	Adjustable universal support (base only)	1

Beam clamps

Design loads

Where design loads are indicated, they provide for a safety factor of 3 in conformance with the American Standard Code for Pressure Piping. For more information, see page 66 for engineering data and specifications.

Finishes and special materials

Hot-dipped galvanized (HDGC) is standard for all Superstrut beam clamps. The material is zinc coated after fabrication providing total product

protection on all surfaces. The fabricated beam clamps are suspended and then dipped into tanks of hot zinc for a prolonged period, creating a coherent bond.

Selected beam clamps can also be available in GoldGalv® (no suffix) or stainless steel type 316 (SS6C). Contact your regional sales office for availability and minimum quantities.

Standard finish – Electrogalvanized (no suffix)

6H series in combination with 500 series beam clamp conduit and pipe hanger

Features

- Accommodates ½ in. through 4 in. EMT or rigid conduit
- Can be used for either vertical or horizontal installation
- 6H-TB Series is threaded so there are fewer parts to handle or drop
- Installs easily with a screwdriver

Fig. 4: 6H-TB threaded series threaded with bolt

Standard finish – electrogalvanized (no suffix). Use SS suffix for stainless steel.
Load rating: 500 lb with a safety factor of 3. (For weight per 100 see page 44.)

Beam clamps

Beam clamps for mounting pipe and conduit

U571, U572 Conduit clamp

For attaching ½ in. thru 1½ in. conduit to beam, channel, angle or column. Secures conduit to the support parallel or at right angles to it.

⅝ in. set screw

12 gauge material

Standard finish – GoldGalv®

Wt./C 38 lb

Pipe supports

Three types of pipe clamps are available to provide right angle, vertical and parallel attachment to a beam. Types RC, EC and PC are malleable iron clamps with an edge that grips the structural member for maximum holding power when tightened.

Type RCS clamps are all steel, providing two bearing surfaces for strong attachment for mounting pipe or conduit at right angles to the beam.

All parts are electrogalvanized (no suffix) including the threads. The clamps are designed for clamping to a wide variety of beam thicknesses and tapers. Can be installed using only a wrench.

Type RC and RCS

- Malleable iron
- For mounting pipe or conduit at right angles to the beam
- Use SS316 suffix for 316 stainless steel
- Use HDG suffix for hot-dipped galvanized

Type EC

- Malleable iron
- For mounting pipe or conduit vertically across the beam
- Use HDG suffix for hot-dipped galvanized
- CSA certified

Type PC

- Malleable iron
- For mounting pipe or conduit parallel to the beam
- Use HDG suffix for hot-dipped galvanized

Pipe straps, pipe and conduit clamps and hangers

Design loads

Where design loads are indicated, they provide for a safety factor of 3 in conformance with the American Standard Code for Pressure Piping.

Hanger design

Pipe hangers are of advanced design to be user friendly.

Finishes and special materials

The standard finish is electrogalvanized (EGC) or GoldGalv®. Some products are offered in aluminum and stainless steel where noted.

701 O.D. Pipe and conduit clamp

Machine screw and nut included.

Pipe straps, pipe and conduit clamps and hangers

Conduit and cable clamps

A716 Snap-Guard® cushioned clamp tube series P716 Snap-Guard® cushioned clamp pipe series

- Assembly consisting of GoldGalv® finish steel clamp with bolt/locknut and cushion
- Secure pipes, tubes and hoses for fluid conductors
- Installation is easy and requires no more time than a simple pipe clamp installation
- Cushion absorbs the shocks and associated vibrations from fluid surges in tubes, pipes and hoses
- It can handle temperatures from 149 °C to -40 °C (300 °F to -40 °F)
- Cushioned clamp assemblies are available individually bagged

Pipe straps, pipe and conduit clamps and hangers

Conduit and cable clamps

U716 Two-hole cushioned clamp

- Guides, protects and uniformly spaces line runs. Low cost, time saving method of attaching tubing and hose to equipment.
- Cushion is built to withstand the effects of most oils, chemical and industrial cleaning compounds, in temperatures from -45 °C to 121 °C (-50 °F to 275 °F). Interlock edge ensures cushion remains in place.
- Attached with two standard fasteners to any flat surface, this clamp eliminates the use of special channels, providing a savings in both space requirements and cost
- Cushioned clamps reduce vibration, shock and noise in fluid systems and eliminates electrolysis

Pipe straps, pipe and conduit clamps and hangers

Conduit and cable clamps

6H series conduit and pipe hanger

Features

- Accommodates ½ in. through 4 in. EMT or rigid conduit
- Can be used for either vertical or horizontal installation
- 6HTB Series have a built-in nut so there are fewer parts to handle or drop
- Installs easily with a screwdriver

Standard finish – Electrogalvanized (no suffix)

Pipe straps, pipe and conduit clamps and hangers

Conduit and cable clamps

When fastening wire bundles, cables or hoses to framing channels, you can cut costs considerably by using this mounting base. It is made of smooth, weather-resistant nylon and designed to protect cable insulation and hoses from the wear or damage that can occur with metal clamps. The mounting base may be used for both indoor or outdoor applications. It installs in the framing channel with a simple push and twist. It requires

no screws, nuts or tools. The mounting base fits all 1½ in. and 1⅝ in. channels regardless of channel depth. Ty-Rap® and Ty-Fast® cable ties can be ordered separately.

- Installs with a push and twist
- Designed for indoor or outdoor use
- Smooth design protects cable insulation
- Takes range of cable diameters

Pipe straps, pipe and conduit clamps and hangers

Conduit and cable clamps

For use with 701 O.D. tubing and pipe clamp. To determine 701 clamp size add 1/4 in. to O.D. tube size to allow for the cushioned strip material.

S716 Cushioned strip for isolation and vibration applications

1/4 in. markings for fast measuring and cutting. Measurement chart is printed on back of carton. 20 feet included in each carton. Prevent metal-to-metal contact with the cushioned strip material. It aids in sound insulation, shock

absorption and protects against corrosion, distortion and abrasion. Cushioned strip material is designed for optimal use between -1 °C and 149 °C (30 °F and 300 °F). Cushioned strip material combined with the Superstrut 701 pipe strap can handle clamping assignments from 1/4 in. to 6 in.

Order 701 clamp separately.

Surface raceway and lighting systems

Material

Superstrut electrical raceway, fixture hanging channel, closure strip and accessories are manufactured from hot-rolled strip steel. Standard finish for the accessories is GoldGalv®.

Design data

Deflections at various hanger rod spacings for raceway channels based on 40 to 45 lb per fixture.

Deflection			
Channel	at 10 ft. (in.)	at 12 ft. (in.)	at 14 ft. (in.)
A1200	¼	½	¾
C1200	⅜	¾	*
A1400	⅜	¾	*

Deflection			
Channel	at 6 ft. (in.)	at 7 ft. (in.)	at 9 ft. (in.)
B1200	⅜	⅝	⅞
B1400	1	½	*

*Not recommended for this spacing.

Electrical raceway

Superstrut channel together with snap-in closure strip is listed by Underwriters Laboratories as a surface metal raceway. Other accessories listed by Underwriters Laboratories are identified on the drawings.

Maximum number of wires

Wire size AWG	Raceway							
	With or without KO							
	A1200 A1400		B1200 B1400		C1200		E1200 H1200	
	A	B	A	B	A	B	A	B
14	6	10	4	6	5	10	6	10
12	6	10	3	6	4	10	6	10
10	5	8			4	6	5	8
8	4	6			3	4	4	6
6	2	3			2	2	2	3

Column A: Suitable for number of wires indicated when used as a raceway. Also suitable for number of wires indicated when installed to support and supply electrical fixtures when raceway wiring is suitable for not less than 75 °C.

By providing clearance between fixture and raceway of not less than ½ in., where suitable for 60°C may be used.

Column B: Suitable for number of wires indicated when used as a raceway. Also suitable for number of wires indicated when installed to support electrical fixtures when clearance of not less than ¼ in. is provided between raceway and fixture and when wiring is suitable for 75 °C.

Right angle slotted metal framing

Create the support framing you need

Right angle metal framing is manufactured from commercial quality steel in three different sizes. The small sizes are 14 ga. steel, the larger is 12 ga. steel. With this offering, an endless variety of metal framing requirements can be met, from lightweight supporting needs to larger shelving for inventory storage.

One of the legs on all sizes is $1\frac{1}{8}$ in. wide, while the other is either $1\frac{1}{8}$ in., $2\frac{3}{8}$ in. or $3\frac{1}{8}$ in. long. Depending on the frame requirements, a single size can be utilized throughout, or the sizes can be interchanged to get the most efficient usage from the material. This section will serve as a guide to plan and build your structure.

Installation time is reduced – inventory space is minimal

Scribe marks are placed every $\frac{3}{4}$ in. which saves planning, layout and cutting time and ensures accuracy. The exclusive slot and hole pattern, repeated every 3 in., is scientifically designed for ease of assembly and rigidity. No welding is necessary, no holes to drill. A $\frac{9}{16}$ in. wrench is the only tool required for assembly. The proper nuts and bolts are included with the material to ensure fast and easy erection.

Right angle metal framing is packaged in 10' and 12' lengths to minimize cut offs and ensure maximum use of material.

120 feet, 10, 12 foot lengths of right angle metal framing take up the same amount of space as one 2x4. A standard package includes 5 pieces to a bundle, significantly reducing handling and storage space.

The importance of cutting right angle easily, quickly and accurately is the key to time-saving assembly. The portable cutter provides these advantages and makes layout and erection of any structure a "light-work" job.

Finish is designed for long lasting durability

The standard GoldGalv® hardware finish is applied to all right angle metal framing after rolling and punching of the holes. This provides you with a number of benefits. First, raw ends resulting from cuts will be protected by the sacrificial quality of zinc. Second, the edges of all holes are protected against formation of rust, to provide a call-back-free installation. Third, the electrogalvanizing provides an excellent bonding surface for paint if desired for aesthetic reasons.

Note: Product is also available in pregalvanized (PG) sections.

Engineering data and specifications

Design data – metal framing channel

Table 3

Design loads for channel used as beam or column

Beam loads

Table 3 contains simple beam, uniformly distributed loads calculated at 25,000 psi material stress. Beam loads are based on channel being loaded across the X-X axis. Loads are also listed at reduced deflections for long spans.

Maximum loads at 25,000 psi stress

Maximum allowable deflections and maximum uniform loads for all spans at 25,000 psi material stress.

Reduced load for all $\frac{1}{180}$ span deflection

For moderate deflections on the longer spans, reduced loads are listed which will produce a deflection equal to $\frac{1}{180}$ of the span. When maximum loads do not induce deflections exceeding $\frac{1}{180}$ x the span length, reduced loads are not required.

Reduced load for $\frac{1}{360}$ span deflection

For very slight deflections on the longer spans, reduced loads are listed which will produce a deflection equal to $\frac{1}{360}$ of the span. When maximum loads do not induce deflections exceeding $\frac{1}{360}$ x the span length, reduced loads are not required.

Concentrated loads

To obtain values for concentrated loads from Table 3, multiply uniform load by 0.5 and deflection by 1.25.

Slotted, punched or KO channel

Reduce load rating by 5%.

Long span deep beams

Support in a manner to prevent rotation at supports and tie between supports to prevent twist.

Column loads

Allowable column loads given are for uniform axial loading with pinned ends. For eccentric loading or other end conditions reduce allowable loads according to standard engineering practice.

Dynamic loads

Allowable dynamic loads may be calculated by dividing the static loads shown in Table 3, by 2.08. Maximum beam and column loading for special materials is multiplied with the following factors:

Channel type	Beam type	Column load
Stainless steel	1	1
Aluminum	0.33	0.33

Warning

Load tables, charts and design criteria provided in this section are intended as guides only. Selection of proper product, installation intervals, erection and placement are the responsibility of the user.

ABB reserves the right to change material and finish specifications without notice, to improve its products.

Engineering data and specifications

Design applications

Cantilever beams

Simple beams

Beams fixed on one end, supported at the other end

Beams fixed at both ends

R - Reaction
M - Moment
P - Concentrated load

W - Total uniform load
V - Shear

Δ - Deflection
E - Modulus of Elasticity
I - Moment of Inertia

Engineering data and specifications

Design applications

Table 6

Conversion factors for beams with various static loading conditions

Load tables on pages 68 through 72 for A, B, C, E, and H series channel are for single span beams supported at the ends. These can be used in the majority of cases. There are times

when it is necessary to know what happens with other loading and support conditions. Some common arrangements are shown in Table 6. Simply multiply the loads from the design load tables times the factors given in Table 6.

	Load and support condition	Load factor	Deflection factor
	1. Simple beam – Uniform load	1.00	1.00
	2. Simple beam – Concentrated load at center	0.50	1.25
	3. Simple beam – Two equal concentrated loads at 1/4 points	1.00	1.10
	4. Beam fixed at both ends – Uniform load	1.50	0.30
	5. Beam fixed at both ends – Concentrated load at center	1.00	0.40
	6. Cantilever beam – Uniform load	0.25	2.40
	7. Cantilever beam – Concentrated load at end	0.12	3.20
	8. Continuous beam – Two equal spans – Uniform load on one span	1.30	0.92
	9. Continuous beam – Two equal spans – Uniform load on both ends	1.00	0.42
	10. Continuous beam – Two equal spans – Concentrated load at center of one span	0.62	0.71
	11. Continuous beam – Two Equal Spans – Concentrated load at center of both spans	0.67	0.48

Engineering data and specifications

Design applications

Example I

Problem:

Determine the load and deflection of an A1200 beam continuous over one support and loaded uniformly on one span.

Solution:

- A. From load table 3 for A1200 the load for a 5 ft. 0 in. span is 706 lb and deflection is 0.358 in.
- B. Multiply by factors from Table 6.
 Load = 706 lb x 1.30 = 917.8 lb
 Deflection = 0.358 in. x 0.92 = 0.329 in.

Example II

Problem:

Determine load and deflection of an E1200 cantilever beam with a concentrated load on the end.

Solution:

- A. From load table 3 for E1200 the load for a 3 ft. 0 in. span is 2,216 lb and deflection is 0.088 in.
- B. Multiply by factors from Table 6.
 Load = 2,216 lb x 0.12 = 265.9 lb
 Deflection = 0.088 in. x 3.20 = 0.282 in.

Column loading

The load bearing capacity of column or compression members is a function of the inherent configurational strength, the unbraced length and design of the end connections.

Values of axial column loading given in Table 3 were calculated using a rotationally free and translation fixed correction at each end (see Illustration I). This gives an end condition constant (K) of 1.

If other end conditions are used, axial loading should be calculated using procedures in the AISI specification for the design of cold formed steel structural members (SG671) and the engineering values for Superstrut channel given in Table 1.

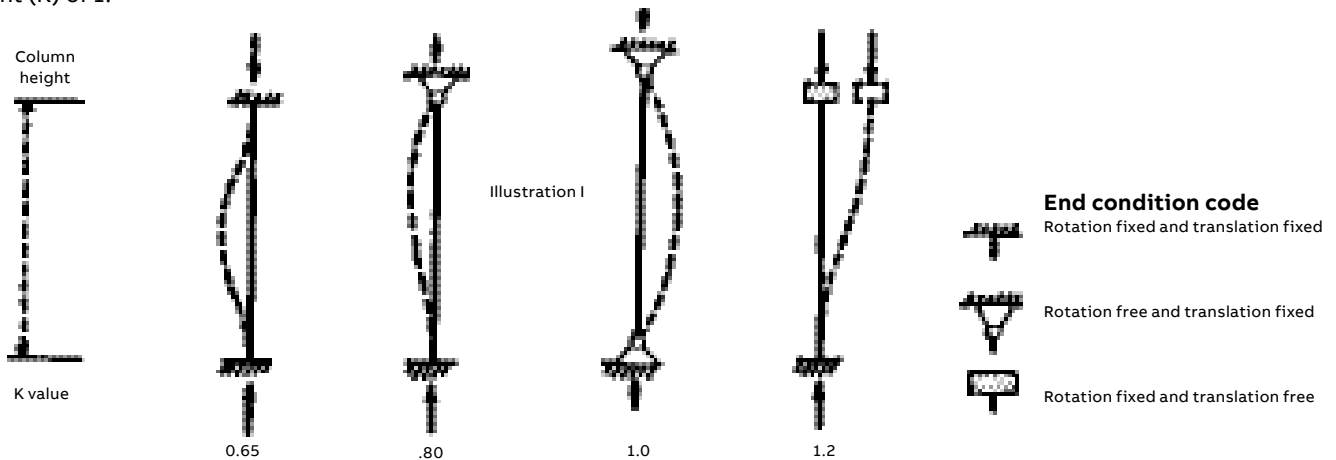

Table 7

Load carrying capacities of hot-rolled steel rod

Nominal rod dia. (in.)	Root area thread (in.)	Design load lb for serv. temperature	
		343 °C (650 °F)	399 °C (750 °F)
3/8	0.068	610	540
1/2	0.126	1,130	1,010
